3D modeling 3D modeling and drawing applications are often used to create three-dimensional models. Some CAD software packages also allow basic three-dimensional modeling. Autodesk's own 3D Studio MAX uses a combination of programming languages to allow users to create three-dimensional models. CorelDRAW includes its own free-standing three-dimensional modeling tools. Autodesk 3ds Max contains the Advanced Physical Modeling workbench, while Adobe 3D Studio Max is included with Adobe Photoshop Elements. Autodesk released AutoCAD 2010 SP3 on January 26, 2010. This includes a new interface and drawing tools. Some of the new features are: Additional features include the ability to create photorealistic paintings from models in 3ds Max, SketchBook Pro, Painter and Photoshop. AutoCAD also integrates with other Autodesk software programs such as Autodesk Inventor, Autodesk Revit, AutoCAD Map 3D, AutoCAD Map 3D Enterprise, and 3ds Max. AutoCAD also has a number of applications for modeling which include: For those looking to create 3D Models that can be shared with others, AutoCAD LT 3.0, released on March 17, 2006, included the 3D Modeling Taskpad. This allows users to import 3D models into AutoCAD from a number of 3D modeling applications. This is accomplished by using the native 3D modeling format, which is exported by the 3D modeling application and imported into AutoCAD LT. Applications such as 3ds Max and SketchBook Pro can be used to create 3D models in Autodesk's industry standard format, the.MAX file format. However, in some cases, the.MAX file format is not supported by some AutoCAD LT software applications. In these cases, the 3D model can be imported into 3ds Max and then exported into the.MAX format. Vector graphics and raster graphics AutoCAD supports vector graphics, such as curves, splines, and dimensions. A user can create dimension, run, and annotation objects, such as tables, sheets, frames, and labels, on these objects. Vector objects can be grouped and combined. AutoCAD is also capable of generating raster images from its vector data. These raster images can be used for editing and storing the data, and can be sent to a printer, scanner or other device for printing. R a1d647c40b
